Fill Your Silo—Fill Your Crib

BY PLANTING

Hoffman's Seed Corn

Why a silo or a corn-crib, if it only gets half full? Plant the corn that will do the filling job right! Select your Seed Corn from this list . . . it is dependable, tested, sound-growing, vigorous seed.

"95 tons Silage from 5-1/5 acres."

That's what Dr. Chas. H. Peck, of Newtown, Conn., got from his Hoffman Seed Corn. (Lancaster County Sure Crop.)

"My Lancaster Sure Crop corn, grown from your seed, was the largest crop of corn in this part of the state. People came from all over to see it."

J. D. Naughton, Plattekill, N. Y.

"Lancaster County Sure Crop"

"Lancaster County Sure Crop" is the leading variety. Now has many thousands of lasting friends. It has the make-up that appeals to practical farmers. Surely does fill the Crib—and the Silo, too. Grows nice, large ears of good, hard corn. And a lot of them! Makes less nubbins than any other variety.

It is a variety for "rough and ready" culture—seems adapted to sections not so fertile. Doesn't ask for the richest soils. Does its best there of course. But comes through nicely on just average land.

Grows a tall, leafy stalk, fine for ensilage. Develops early, withstands drought well—produces a crop of finished corn well to the North. Husks very easily. Shells well. Cob is not thick, but long. Rows are closely set. Grains not so extra deep, but of good size and solid. Sixty-six to sixty-eight pounds of ears easily shell a bushel of corn. Rich in protein—a variety of very best feeding value. Here is seed that has been properly cared for, cured right, tested and sound in every way.

"I got a very good yield of corn from your Lancaster County Sure Crop and was well pleased with the seed purchased from you this spring."
Wm. G. Stevens, Jr., Sykesville, Md.

"Long's Champion Yellow Dent"

This is just the corn for those in search of large-eared, deep-grained varieties. Requires richer land, more careful culture, and a longer season than do smaller-eared sorts. Ears have good thickness—good length, Grains are deep and wide.

Also good for the Silo. Rich in feeding value. Produces a heavy tonnage.

"White Cap Yellow Dent"

This variety differs from every other on our list. Ears appear white—but when shelled, the sides of the grain show yellow. A heavy yielder of solid ears.

Rows of grain are closely set on the cob. Ears of moderate thickness. Grains are of good size.

Doesn't require richest soils. Matures medium early.

"White Cap Yellow Dent Corn—surpassed any other corn we have ever had, both as to quality and yield."
J. H. Colkitt & Son, Bordentown, N. J.

"I planted six different kinds of corn, but yours beat them all. Your Lancaster County Sure Crop yield doubled the amount of other varieties."

R. H. Whiteoak,
Chesapeake City, Md.

"Reid's Yellow Dent"

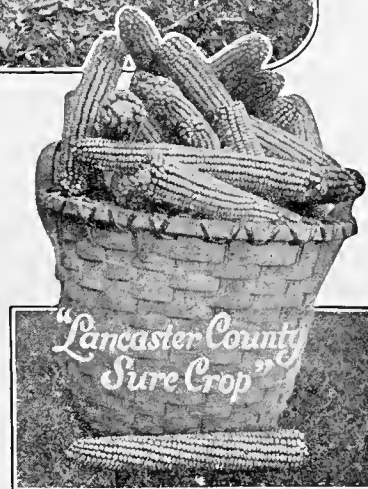

A good corn for southern Pennsylvania, Delaware, Ohio, New Jersey, West Virginia and Virginia. It is not quite early enough, however, for the northern mountainous sections. This is a real good practical yellow corn. It is the most compact ear of corn that we know of. The ears are medium sized. It has a red cob and very thin, deep yellow grains. Long and deep from the tip to the butt. Regular rows from end to end. The rows are set very closely on the cob. You get more shelled corn and a very thin cob with Reid's.

"Eureka Ensilage"

This is a special silage variety. Grows to a great height, produces an abundance of leaves. Does not at all answer the double-purpose silage-and-grain requirements now demanded by so many folks. But does give a large tonnage of ensilage.

"Improved Leaming"

A good yellow corn. Will thrive on most any soil. Wedge shaped grains that are deep. Red Cob. Medium sized, tapering ears. 14 to 18 rows to the ear. Thick stalks. Wide leaves. Excellent for fodder. Improved Leaming will do its best on good soil, but it will thrive on soils not too rich.

Only 7c. an acre to keep birds from pulling out your Corn. Treat your Seed Corn with our

Soy Beans

Inoculate your Soy Beans properly. They will build up your soil for you. Great gatherers of nitrogen. **PLANT ANYWHERE.** Plant Soy Beans on most any

kind of soil. If your soil is sour, however, add lime in order to get the best results.

FAST GROWERS—THEY FIGHT WEEDS. Soy Beans are disease free . . . exceptionally hardy. Plant them when the ground is good and warm . . . not until after corn planting time.

"WILSON BLACK" SOY BEANS. The best all-round, general-purpose variety. Makes Hay, Beans, or silage. A strong, fast grower with slender stems and branches . . . makes fine Hay. This variety matures Beans in lower Pennsylvania, higher New Jersey and states to the south. "Wilson Black" does well and produces beans on poor soil. . . On good soil, it produces more forage. "Wilson Black" is a medium sized jet black Bean. Often yields 25 bushels and more of Beans per acre. Use "Wilson Black" for Hay, forage, soiling and green manuring. See Price List for other Varieties of Soy Beans.

Sudan Seed

"4 Acres of Sudan Carried 20 Cows for 4 Weeks,"

Says Walter Townsend, Cochranville, Pa.

Sudan grows quickly. 50 to 70 days. Second crop in the next 45 to 50 days. Stools remarkably. Hay equals Timothy. For hay, cut when in bloom or a little earlier—about the time the heads appear.

Sudan is re-seeded each year. When other grasses wither because of dry weather, Sudan keeps supplying good rich pasture.

Don't sow Sudan until the soil is warm—corn-planting time or a little later. Seed can be drilled or broadcast—cover a half inch. Broadcast 18 to 24 pounds per acre. Sudan is often sown with Soy Beans or Cow Peas, making a fine combination. Sudan is a quick, sure, heavy producer of hay, pasture or ensilage.

Seed Prices—See Other Side

"8-Row Yellow Flint"

If you have a short season try this old standby. Can be planted in June and will still mature a crop. Eight rows—ears 9 to 11 inches long. Often producing two ears to the stalk.

"Johnson County White"

Here is our only strictly white corn. Always successful. A great favorite where a heavy leafy growth is wanted. You can easily get all the tonnage you want for ordinary silo requirements with "Johnson County." It is a late variety and requires a long season to mature the ears. Does not require rich soil. Always a money-maker where climate permits. A prize-winner at many shows.

"New Improved Semesan Jr."

Treat your Seed Corn with Semesan Jr. Costs but 3c. to 4c. per acre. Destroys many seed diseases. Permits earlier planting. Makes better, larger crops. Easily applied. Does not slow up planter. Use 2 ounces per bu.

Prices:—4 oz., 50c.; 1 lb., \$1.50; 5 lbs., \$7.

"Early Leaming"

A very early yellow corn. Small ears. Good-sized grains. Cobs low down on stalk. A handsome, rich golden yellow corn—unsurpassed in color. Does well in northern Pennsylvania and in sections of high altitude.

"Red Cob White Ensilage"

Adapted to conditions over a wider area than is any other ensilage corn. Grain white—grows on a red cob. Stalks grow tall—produce an abundance of big leaves throughout their length. Sweet, juicy, tender, yielding an abundant tonnage of ensilage or fodder.

"Hoffman's Early 90-Day"

Maturess in about ninety-five days. Makes fodder and ears of medium size. The cob is thin—husks easily. Grain is surprisingly large for so early a corn. It has a rich golden color. For something early, try this Corn. . . . It will serve you well.

SWEET CORN

"Stowell's Evergreen"

Grown in Lancaster County, Pennsylvania. Here is a supply of nice quality Sweet Corn seed. It is the good old standby. Whenever reliable croppers are mentioned, "Stowell's Evergreen" usually heads the list. Was brought in early in the Fall. Dried and properly cured in this modern seed-corn drying plant of ours—and has come out just fine! Tests for germination show it almost perfect! Prices—see below.
